

CASE STUDY

BASSETLAW SCHOOLS

Hyload Structural Waterproofing gets top marks for a project set to revolutionise education in Bassetlaw

The Bassetlaw district comprises an area of 246 square miles in the north of Nottinghamshire. The area has suffered in recent years through the decline of local industries, a lack of investment, poor transport infrastructure, and a decline in the population.

The Bassetlaw Schools PFI project aims to raise standards of teaching and learning and the achievement of all pupils aged 11-18. The project will see five secondary schools, one special school and two post 16 centres entirely rebuilt in a reconfiguration of education in the area.

Contractor, Marlborough Brickwork specified Hyload Original, a high performance DPC which is suitable for providing damp proofing in all applications, where DPC colour is not critical. The product is renowned for its reliability with over 40 years of no reported material failures.

Paul Donnelly, Managing Director at Marlborough Brickwork Ltd, explains why Hyload Structural Waterproofing was the obvious choice for this project.

“Our main concern when specifying a product is the longevity and performance that it offers our clients. The reputation and heritage of Hyload DPCs and cavity tray systems makes these products an obvious choice on all projects. The Hyload DPC systems have always performed to a very high standard and is the main reason

Project: Bassetlaw Schools
Sector: Public Sector
System: Hyload Structural Waterproofing
Products Used: Hyload Original DPC, Hyload DPC Jointing Tape & Fixing Strip
Contractor: Balfour Beatty Construction Ltd
Architect: Aedas
Started: Spring 2005
Completed: September 2008

why we specify the product whenever we can.”

Hyload Original DPC delivered a first class damp proofing solution for schools within the project. Hyload DPC Jointing Tape and Hyload DPC Fixing Strip were amongst the other products used for these jobs, ensuring a high quality finish to the buildings.

The BBA Certification provides specifiers with the knowledge that all Hyload products are high performing and long lasting. Both tough and durable, Hyload Original provides excellent flexibility at low temperatures and performs exceptionally under compressive loads.
